Senior QA Automation Engineer

A little about Us

PayEye is a Polish fintech that introduces the safest and most convenient payment system based on biometric technology using the iris of the eye. We are the first in the world to introduce such a solution commercially, thus changing the perception of the client with personal finances.
Are you an experienced Java Developer that is ready for the next challenge in a highly skilled Fintech environment? Do you want to work on the latest technologies among the best specialists and most interesting projects on the market? Would you want to learn the technologies of the future and deliver excellent software with each iteration? Would you want to have a real impact on the environment that you work in and shape state of the art products? Join us to build the most modern biometric payment solutions.

You will be

- creating testing strategies with accordance to the highest standards
- ensuring sufficient test coverage and documentation
- writing highest quality tests that meet payment industry standards
- involved in preparation of testing environments
- ensuring that User Stories have Acceptance Criteria and all are executed before deployment
- collaborating with other units within technology departments

To be successful you will need

- minimum 5 years experience with test automation
- experience in tool like Selenium, Web-Driver, SoapUI
- exposure to REST, SQL, Web API, XML, JSON, HTML
- familiarity with JIRA, Confluence, GIT
- experience with CI tool like Jenkins or Teamcity
- experience in tracking and reporting of defects
- identification of opportunities to improve further testing automation
- willingness to work in an Agile team
- producing clear and readable reports
- fluent polish and English skills

Nice to have:

- intermediate Java or other programming language skills
- JMeter or other performance testing tool
- Postman for API testing

The Benefits
